part from the disappointment of the Sinclair stand, this year's Personal Computer World Show was the most exhiterating for years. For one thing it signalled the first signs that the new 68000-based machines really will be a quantum leap. Brataccus on the Atari looked very good indeed and, for what is almost the first entertainment package for the new machine, it was outslanding. It will also run on the 260ST - a machine which should sell for under £500.

The Amiga - Commodore's ST rival - also looks set to have some dazzling software. Although the machine was not shown in the public display, Commodore's private previews showed among other things a flight simulator with incredibly fast solid 3D graphics and stereo sound sampled from a real 747. The two machines are a vindication that 68000 is a fundamental advance for domestic micros. But it is also an important reminder of the importance of support chips in the design of a new machine. The more one sees of these machines the more one realises how horribly wrong Sinclair went with the QL

Between the ST and the Amiga a choice is easy. The Amiga has everything. Sound sampling. Graphics and animation capabilities the like of which have never before been seen at four times the price. True multitasking. And because of its three custom chips the processor is often only using a fraction of its power. The speed of its line drawing and hardware area-fill routines have 55 be seen to be believed. As if that wasn't enough the Amiga can be fully IBM compatible running IBM software at the IBM's slow speed (Commodore's joke). Everyone who sees the machine becomes captivated by it.

But there is a real danger that this wonderfully intoxicating micro cocktail has too many ingredients.

its performance-per-buck is incredible. But, whichever way you look at il. £1,000 is still an awlul a money.

It is quite likely that Atari has better judged the market in the UK. Its 260ST offers a lot less but costs under half price. The Amiga may to the machine you would love to own, but the ST may be the one you can afford.

Cl6s and Plus/4s go out of fashion

COMMODORE has confirmed that it is to drop the C16 and Plus/4 computer in the UK.

"I don't think there will be any Plus/4s or C18s available after Christmas," said Commodore's sales and marketing manager Paul Welch. "By then we will have built out all our remaining component stocks."

Sales of both machines have been disappointing, and each has suffered heavy high-street discounting, especially the C16, which was launched at £129 and has been widely available at £69.95 for some months.

Upgrades for 664 on the way – but not from Amstrad

AMSTRAD has categorically denied that it will offer any up-grade to CPC 664 owners to turn their micros into the equivalent of the CPC 6128.

However, add-on Rampacks are expected by the end of October from third-party vendors. In Germany, users can already buy 256K of add-on memory.

"Amstrad will not be doing any up-grade or compensation scheme itself, but we're quite happy for third parties to provide add-ons," said Amsoft's William Poel.

The CPC 6128, which has superseded the 664, was launched in the US in June. At that time, Amstrad claimed it would not be launched over here until next year.

The discontinuation of the CPC 664 has provoked an angry reaction from owners, not only because that their machine was withdrawn so soon after launch, but also because Amstrad gave no warning of the machines demise. Many dealers have also been left with quite high stocks of the 664, whose price was higher than that of the 6128.

Despite the absence of any C128D models at the Personal Computer World Show, Commodore claims that the machine - the version of the C128 with a built-in 5½ inch disc drive - is still planned for release, possibly in time for Christmas.

The C16 (top) and Plus/4

"We don't have any dates finalised for the Cl28D, but it's not dead," said Cail Wellington, Commodore's European software manager.

It is understood that Commodore UK is keen to introduce the machine in this country, as a reply to Amstrad's CPC6128 and PCW8236, and Atari's 260ST, all of which have built-in disc drives.

Amstrad apparently denied it had any plans to launch the 8128 in the UK up to as little as 25 days before the machine appeared in the shops. One 664 owner, college student Ben Woolley, claims that before buying his machine on July 20, he telephoned Amstrad to ask if the machine was to be discontinued. According to Ben an Amstrad representative assured him that the CPC664 would not be dropped, and that the 6128 was intended only for the US market.

"Amstrad never announces a product before it is ready," William Poel explained. "It is entirely possible that the person on the phone did not know of the policy to bring over the 6128.

"Amstrad is a large company and there are employees who don't even know we produce computers at all." However, Commodore US is not so keen - in the States, the 8-bit machine could conflict with Commodore's new 16-bit Amiga, even more heavily than the stand-alone C128, as a home machine. Moreover, the external appearances of the C128D and Amiga are very similar, with separate keyboard and drive unit in almost identical colours.

When the C128D does appear in the UK, it will be priced at around £500, according to Paul Welch. The arrival of both the C128 models will also pave the way for the Commodore 64 to be rehoused next year. Paul Welch admitted that its five-year-old casing is beginning to look a little dated.

Over 170 titles for Atari ST

ATARI has an impressive list of over 170 software titles currently being written for its 520ST micro, publicly shown for the first time in the UK at the PCW Show.

The majority of the titles will also run on Atari's cutdown ST model - the 260ST. The 260ST is now scheduled for UK sale between October and Christmas.

The majority of the planned programs are business titles such as word processors with BOS's BOSWriter, Fydler's Mailmate, Spellmate and Wordmate and Precision's Superscript all set for launch before Christmas, in addition to Gemwrite which is bundled with the ST.

Database packages are expected from Talent Computer Systems, BOS (Autoclerk and Autoindex) and Precision (Superbase) among others, although Precision and Talent do not expect to release theirs until January 1986.

Mosaic, BOS, Kuma and Haba Systems all have spreadsheets planned, and business graphics packages,

High street shuns Acorn

FOLLOWING the launch of the 128K version of Acom's BBC 8 Plus, the future of the existing BBC machines and the Electron looks doubtful.

The machines have already been dropped by some retailers, and the Electron was given a very low profile at the PCWshow.

W H Smith has already discontinued both the BBC micro and the Electron and Rumbelows is not now reordering until it has selected its Christmas range and ascertained that Acorn's machines are on the list.

"We're completely out of stock of the BBC at the moment," said Terry Greenwood of Rumbelows. "But we still have to decide which micros we'll be offering at Christmas, and we're no more likely to drop the BBC than any other machine."

Acorn has recently concluded an agreement with Dixon's for the latter to sell the Electron in a bundled pack - a deal which, it is thought, will clear most of Acom's remaining stocks.

Dixon's Electron pack costs £99.99, and offers the computer with a data recorder and five pieces of software.

include Fydler's Mastergraph and Cadcam from Rising Star.

There will also be a number of languages, including Metacomco's series, HiSoft's C, Pascal and Devpsc, and Computer One's Assembler! Monitor, C, Pascal and Forth.

Island Logic is converting its Music System, Crossbox Music plans a Music Writer, and Mirrorsoft releasing Fleet Street Editor.

On the entertainment side, Infocom is translating its entire adventure range, and hopes for launch by October. Jeff Minter is converting his light show Colourspace for Liamasoft, Talent plans to make Zkul and Westavuilable while Firebird is developing a new game, Star Glider.

one but Sir Clive expected, the QL hit the streets and that's when the trouble really began.

There seemed to be more bugs in the Basic and the operating system than there were machines sold! The Microdrives, with the bundled software, were as slow as the Sinclair delivery department.

I admit the machine has memory, enough to make any BBC owner drool visibly. But it has yet another disadvantage, which must have put off more potential customers than Sir Clive's creditors would like to recall. Software. Or a lack of it. You can count on the fingers of no hands the amount of "megagames" out for the Ol.

Sinclair should now admit defeat in the business market, and put every effort into ensuring that software houses unleash their programming skills on to the QL.

MUD Challenge Competition

More than a competition, more like the greatest challenge an adventurer can face.

This week Popular Computer Weekly (where things of beauty, truth and honour hold sway) seeks a champion to take on representatives from the plains of darkness, evil and inflated circulation figures (other computer magazines) and fight for us in MUD – where the baddies are so real you can speak to them!

MUD

MUD is an adventure game played, using a modem link, on a vast database run by British Telecom. It features all the classic adventure elements, mysterious objects, magic objects, treasures forests and complex puzzles but with one important additional feature - lots of people can play it at once and you can meet and converse with other players on your travels. This adds possible elements like rivalry, betrayal and joining forces.

The Challenge

A representative from each of the computer magazines will be provided with a MUD pack consisting of all you need to get started and free tuition on-line advice on how to play from a MUD champion.

You will fight it out at a MUD marathon is be held later in the year at the London Dunceon.

The Competition

Our champion will be the winner of the following competition. All you have to do is answer the following questions, carefully designed to reveal your true adventuring mettle, then fill in the sentence at the end in not more than 12 words. Competition closes 30th September 1985, Five runners up will receive Firebird Silver Games.

- 1. Who wrote the original Colossal Caves?
- 2. How do you escape the Trolls in The Hobbit?
- 3. Who wrote the Zork trilogy?

I want to be *PCW*s champion because

Amiga – further details emerge

MORE details are emerging on peripherals available for the advanced Commodore Amiga micro, now scheduled to be launched officially in the UK in the first two months of next year.

The machine is available in the US at a price of \$1295 (around £1,000) for the keyboard, mouse and disc drive. The A1080 monitor, a high resolution ((640 x 400 pixels) 80-column colour model costs an additional \$500 (£380), although the Amiga does in-

clude a modulator, allowing it to be connected to an ordinary domestic television. The PAL UK TV version is currently under development and first models could well be circulated to development houses by the end of this year.

A second 3½ inch disc drive costs \$300 (£230) and a 256K memory expansion – bringing the memory up to 512K – costs \$185 (£150).

With the addition of a PC DOS emulator for under \$100

(£80), the Amiga becomes IBM compatible. Another \$100 will buy an accelerator to make transfer speed on IBM files the same. A 5½ disc drive to take IBM compatible discs costs \$500 (£380).

Olivetti completes Acorn rescue

ACORN's refinancing procedures are now complete, and Olivetti has officially acquired 79.8% of the company (see Popular, August 1).

At the Extraordinary General Meeting held last week, shareholders approved the issue of 400 million new shares to Olivetti International for £4m.

"Which is the main event?"

PCW Show News

Pazazz at PCW

The star of this year's Personal Computer World Show - the most exciting for several years - was uncuestionably Atari. Its new low-cost 16-bit 520ST stole the show with strong software support. Amstrad proved a big attraction, too, its stand showing the 6128 and 8256 for the first time was an impossible crush throughout the five-day event.

Big crowds and many new products made it the biggest ever Personal Computer World Show - with a record 70,000 visitors. Not bad for an industry fashionably at death's door. The only let-down was Sinclair which

had nothing new on the hardware side except a new printer.

The promotional displays are getting bigger and brasher, though. For movie lovers, clips from Rambo: First Blood Part II and Goonies were on continuous display at Ocean and US Gold's stand respectively. Ariolasoft showed its games on a giant screen overlooking the balcony; Melbourne House incorporated holograms. Quite what System 3 was attempting to promote was unclear, but it involved a mix of karate, a Rambo not-verylook-alike (on loan from Ocean?) and a troupe of women brandishing whips and weaponry.

tari and Amstrad dominated as far as hardware at the show. Atari had always threatened to take over virtually the whole of the ground floor with its 520 STs - on show in the UK for the first time in public - officially launched at the show.

Perhaps Atari had not bargained for Amstrad's whirlwind of summer activity, when it looked as though we could

expect a new machine a week.

Amstrad's PCW 8256 and CPC 6128 were being warmly received by visitors. However, the company was also showing software running on the now defunct CPC 664. Reactions to this were rather cooler, particularly from people who had bought a machine recently and dealers left with large stocks.

In addition to well over 50 520STs. Atari also showed a 260ST, with the builtin drive, in a vast glass case which also housed a Winchester hard disc unit for back of the left hand side. Atari hopes the 260 ST will become available before the end of year, and possibly as early as October, at around £450.

The 10M hard disc shown, the SH 317, was a prototype version only, but again this is scheduled for a Christmas release at around £650.

One disappointment was the non-appearance of the CD Rom which Atari showed at the American CES in June.

"Our CD Rom player is with software developers at the moment," said Atari's UK sales and marketing manager, Bob Harding. "We are still planning to release it in this country."

Acom managed to spring a surprise on most people at the show by prominently displaying a 128K version of the BBC B.

The 128K BBC B Plus is simply the 64K version with another board fitted in. The extra 64K Ram is made up of four side-

ways Ram slots, and Basic programs are stored in this space. The new machine should be available by the beginning of October at £499. The 64K BBC B Plus sells at £469. Acorn claim no price changes planned. seems likely that the 64K B Plus will now quietly disappear.

Acorn was showing a number of peripherals with the BBC - including a display of robots

controlled by the machine. Il also had a CAD (computer aided design) system controller from Robocom on show. The Bitstick itself looks a little like a joystick, but each movement is precision controlled, to enable meticulous design graphics on screen.

Acorn's new 128K BBC +

New products on Sinclair's stand were confined largely to software, although some new peripherals for the QL were on show. The disc drive from Microperipherals, which Sinclair is putting its own name to, was being shown prominently. The 31 inch disc drive package comprises drive, disc interface, and a utilities disc for £296.70. Additonal drives cost £159.85.

CST's Winchester hard disc was also being shown; with a 10M capacity, and a peak transfer of 600K per second, this COSts £1,380.

Sinclair is also planning to badge manufacture a printer for the QL to be brought out around Christmas, at around £250. Sinclair stand representatives were quick to point out that the unnamed, unmarked printer being used with the QL was not necessarily the model that will be appearing in the shops under Sinclair's name.

However, there was no sign of any new machines. It is now thought any further embellishments to the Spectrum Plus may not appear until next year. Sinclair claims that the Spectrum Plus is currently selling as strongly as ever, if not more strongly, and "if it ain't broke, don't fix it" was the attitude, according to a Sinclair spokesman.

Commodore's stand was almost entirely devoted to the C128, although Music Sales took over around one guarter of the space to demonstrate its range of music hardware and software for the Commodore 64.

The C128 is now expected in the shops any day now, although only in the stand alone configuration - there were no C128Ds at the show.

'We don't have any release dates for the C128D at the moment, but it is by no means dead," said Commodore's Gail Wellington. "We never deliberately set out to release the two versions continued over the page

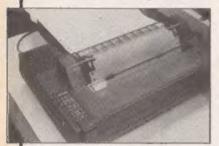

The 260 ST is designed to be fully software compatible with the larger version. The disc drive version, which will probably only be available in Europe, has the 31 inch drive fitted very unobrusively under the keyboard at the

12-18 SEPTEMBER 1985

PCW Show News

simultaneously."

The Amiga was not shown to the public. Special viewings to trade and press representatives were arranged, however. The reason, according to Commodore staff, was twofold—the C128 was intended to attract all the attention in the show, and it was too early to be showing a machine that will not be launched in this country until early next year. Despite this, there were huge queues in Metacomco's stand, where visitors hoped that the authors of Amiga Dos would have it on public display, and Commodore's trade and press demon-

Sinclair's new printer

strations at the nearby Royal Kensington Hotel were packed.

The C128s were shown running a variety of software — Way of the Exploding Fist and Frankie to demonstrate C64 compatibility, and CP/M programs showing the machine in CP/M mode.

Music Sales gave continuous demonstrations of its range for the 64. Its series includes, on the hardware side, a mini synthesiser overlay for the 64's own keyboard as part of the £29.95 Music Maker package. which also contains software and songbook, and a sepasynthesiser. rate The Playalong album range and Sound Sampler are also available, the Sound Sampler coming out next month.

Enterprise

stressed its 128K machine strongly at the show — there were no 64s on the stand at all. "Frankly, the 64K machine simply isn't in demand," said on stand representative.

However, with the 128, Enterprise was making a strong display of its disc controller EXDOS. This powerful controller will connect to any Shugart 410 interface drive, so that, 3, 3½ or 5½ inch drives can all be used. It is also compatible with MSDOS, which gives the machine file compatibility with IBM, Apricot and MSX type machines. The disc controller costs £99, and is due out this autumn.

Four of the MSX manufacturers joined forces for an MSX stand — JVC, Sony, Mitsubishi and Toshiba. Toshiba, incidentally, also gave a 'home of the future exhibition' separately at the show.

Toshiba's new HX-22 adorned both stands, while Mitsubishi and JVC also displayed enhanced MSX machines, with 128K Video Ram and 80 column screens.

ACORN The Best gets Better.

JVC's HC-80, already availabe in Japanese shops, is set for launch here in spring 1985. The display at the show demonstrated the capability of the HC-80 to control a video disc player, putting captions on screen from the computer.

Mitsubishi's GLI was being used as a frame grabber, digitising pictures from a video camera set adjacent to the stand. Software can then be used to manipulate the digitised image, making it smaller, larger or changing its screen position.

Mitsubishi was also showing a version of its enhanced machine configured like a PC with a separate keyboard, connecting to a 3½ inch disc drive and cpu in one unit, but still retaining the standard Z80 processor. This machine, in prototype version only at the moment, will cost around £300 when brought over here.

The other enhanced MSXs are expected to cost around £250-£300 as the prices of current models continue to fall.

Christina Erskine

Software takes a leap

Much new software was promised for the PCW show and some was delivered. Several promised megagames either didn't turn up or were represented by demo screens only; others appeared vicariously as excerpts from the films they were based on.

his is a bizarre trend I've noticed over a couple of shows now, some of the bigger companies bring along great piles of monitors showing last year's blockbuster film they've licenced, or various pop groups. Certainly people stand and watch the movies, but does it make them buy the game?

During my two hour quest for the Sunshine stand I came to several conclusion. There were some new programs that were superb and there were some that were so astoundingly tedious you could be forgiven for thinking this was 1983.

Some of the impressive new games were expected — Fairlight, Wizardry. Some were real surprises like Sandy White's stunning new game I, of the Mask and Psygnosis' Brataccas, the best kept secret since the bombing of Pearl Harbour and my vote for game of the

show. More of these two later.

Some of the most awe-inspiring computer program demos weren't at the show at all. That is to say they were in the show, but not at it. Or rather they were in

the show to those at the show with a magic grey invitation. You can tell from all this stuff that what we are talking about here is the Amiga which was and wasn't there.

The demos of a flight simulation on the machine featured samples 737 engine noises — it sounded exactly like a real plane. After seeing the

Amiga in action, Jeff Minter, famed paychedelic game designer, seemed to be walking two inches off the ground in ecstatic delerium.

From software you can't buy on a machine that wasn't at the show to the stuff that you can buy on the machines that were. Mikro-Gen was due to show Shadow of the Unicorn, the first of its series of games using the Mikro Plus, but it was not in evidence. Apparently it was 'sent back for improvements to some of the graphics'.

Mikro-Gen were showing a demo of

the I. of the Mask from Electric Dreams

PCW Show News

Three weeks in Paradise from Mikro-Gan

Three weeks in Paradise, a Wally program that will be using the device although the demo, in fact, was not using the system. As such it looked like the other Wally games with nice detailed graphics and an assertive indifference to attribute problems. Also impressive was a demo screen of Battle of the Planets, licenced from the BBC cartoon and featuring slick vectors graphics.

In a similar position was Beyond who showed a short demo program of its mega marketing deal, Superman which revealed some smart graphics, but little

More complete was Enigms Force, a mightly impressive Shadowfire followup, which looked to have similar design but some nice new touches, including even better music.

Around the corner, Melbourne House was showing Lord of the Rings featuring full colour and animation - the only problem was that it was the cartoon film

Young Ones from Orpheus

not the computer game. The latter was nowhere in sight. Way of Exploding seems to have chopped its way deep into the company's consciousness because being demoed was Fighting Warrior a game which, though described as a quest arcade game set in Egyptian times", seemed to feature quite a lot of kicking, punching and hacking.

When not dreaming of Amigas, Jeff Minter was to be found on the Llamasoft stand with his latest creation, Ballyx which looked fiendishly complicated and very colourful. I can say little about except that I think the goats are back

The System 3 stand drew vast crowds every two hours, hmmmm, must be the new Karate game you're saying. Wrong!

Instead of films. people in fancy dress or a quest celebrity, System 3 had a dance troup of writhing women wearing virtually no clothes at M. This is an old computer show trick and goes a bundle with tired distributors in need of entertainment.

Orpheus WATE showing a few of the screens Young Ones, the computer

version of everyone's favourite half hour of anarchy. The characters did vaguely resemble the people they were supposed to be; Neil's round shoulders being particularly in evidence. The Commodore version of the game featured some excellent sound as well.

Martech had the biggest personality tie-up, when it had big personality Geoff Capes fied up with trucks in Geoff Capes Strong Man - the game. The graphics looked nice, but I couldn't belp thinking that sporting personality tie-ins were beginning to get a bit tired. Who's going to be first with Terry Wogan's chat show challenge?

Rod Cousins had a section iff the Activision stand for the first two titles from Electric Dreams - his new software house. Riddler's Den looked a bit Ultimatesque, but I, of the Mask looked stunning. The game appears to use the

kind of 3D design and shading techniques Sandy White used on Ant Attack to create a vast three dimensional maze.

It also features a mask that giant Boats ACTORS screen. Parts of the game could almost be left static like computer art, just to he appreciated for own sake. their Sandy hopes to get the game finished within a couple of weeks.

The Activision stand proper had a couple of new titles Brataccas from Paygnosis on show, in particu-

lar the enigmatic Hacker. A program whose complete lack of background information is part of the point. You Log on and take it from there, trying to find out what on earth is going on. It looked impressive, but isn't the sort of game to be judged quickly, staring at a monitor at the show

Firebird finally showed its Ultimate conversions for the Commodore 64. Se-

bre Wulf looked exactly like Sabre Wulf down to the last detail - I almost think I saw an attribute problem.

Mirrorsoft had the first BBC version of Fleet Street Editor on show. This all in one package mixes word processing, layout, design, picture manipulation, etc. and is designed to enable the simple production of magazines, lanzines and other printed information.

There were inevitable jokes about it replacing the NGA and solving the Mirror's problems that were greeted with fixed grins by Mirrorsoft staff. It impressed me a great deal, although the system only becomes really viable with plenty of memory, a disc drive and a good printer.

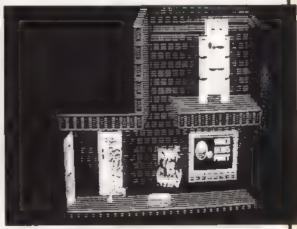

Also on the BBC was Strike Force Harrier, a simulation of the Harrier Jump let which featured quick screen updating and detailed graphics.

A surprising proportion of the serious software around was for the ST which was much better supported than anyone expected.

The ST was also running the game of the Show - Brataccas by a new company called Psychosis.

Paygnosis turns out to be some ex-Imagine people and Brataccas turns out to be stunning.

It's the first game that really looks like it's running on a powerful machine. Imagine Dun Darach with much more detailed and colourful graphics, even more character independence, and some stunning animated effects. From the box cover by Roger Dean, to the beard on the funny man who floats about

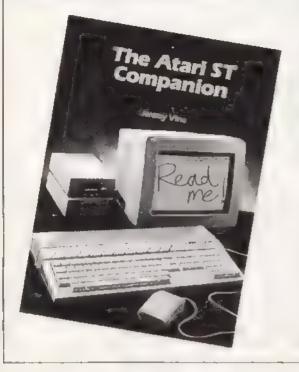

on a hover chair the package looks impressive. Don't look at it II you can't afford an ST!

Games are getting closer and closer to movies and Brataccas is a pretty big jump in the right direction.

Things are looking up - the most interesting show for software in a long

Graham Taylor

Discover the Atari ST

Jeremy Vine's Atari ST Companion will tell you all you need to know if you're wondering whether to invest in the most talked-about new micro of 1985 - the Atari 520ST. Jack Tramiel's new wonder-machine offers you the "power without the price" - a 68000-based window, icon, mouse micro with the GEM graphics environment from Digital Research, all for £750.

The Atari ST Companion has been written with the benefit of full hands-on experience of the machine. Jeremy Vine begins with an overall look in the ST, followed by a detailed introduction to the GEM (Graphics Environment Manager) system. This offers facilities comparable with the much more expensive Apple Macintosh, including windows, pull-down menus and the facility to use a mouse in point in icons to replace typed commands.

Also covered is the Atari Intelligent Keyboard Controller, the very sophisticated sound system of the ST (which includes the industry-standard MIDI interface), the TDS operating system and the graphics LINE "A" interface.

So, whether you are already the proud owner of a new ST. or just thinking of learning more about this revolutionary new micro, send off today for this great new Sunshine book.

Do you get bored waiting for your disk drive to load

your tavourité programs? Thinking a reverting to turbo' tape routines because

they're quicker? WÁITH

From SUPERSOFT comes a great NEW product which you can fit in minutes to apprade your Commodore 61 and 1511 Disk Drive. All disk operations are speeded up as much as THREE times (for example, programs which normally take a minute to load will load in twenty seconds or less using FLASH!)

1541 TLASH is 100% compatible with Commodore BASIC However, if you really want to you can easily revert to the normal slow mode at any time - but we

don't think you will!

If you take your programming seriously you can speed DATA transfers by up to 10 times normal speed (in your own programs), and can also make use of 11 screen editing functions, as well as 17 disk commands

Pressing SHIFT and RUN/STOP becomes the same as LOAD. But so you can start work about five seconds earlier each day!

Supersoft have 1541 FLASH in stock NOW no send your eneque for £89 95 or phone 01-861 : 166 to order by Access

Unlike some add-ons we could mention, 1541 FLASH' leaves you all your memory and the cattridge port available.

Winchester House, Canning Road, Wealdstone, Harrow, HA3 75]

Smash hit

Program Now Games Micro Spectrum 48K Price £8.95 Supplier Vigin Games.

arning! Do not confuse this with the chart-topping Now That's What I Call Music LP tape. I have no idea whether it would be worse to play it through your Walkensn or feed The Thompson Twins into your Spectrum!

Strangeloop

This is, however, the micro

compilations, and should prove to be a similar smash. First up is Lords of Midnight, an undeniable classic which,

Arabian Nights

if you don't already have it, probably alone makes this worth buying. My only grumble is that you need a magnifying glass to read the map of Midnight once it's reduced to standard cassette-box size.

As the arcade adventure has been the favourite genre of the past decade (or so it seems) it's not surprising to find four of them here. Brian Bloodaxe shows most familial resemblance to his alliterative relative, the Manic Miner, while Strangeloop adds to the

complexity and includes a lot of shooting. Arabian Nights seems to be more about preplanning and careful timing, while Pyjamarama marked the second appearance of Wally Week, trapped in a nightmare. These games prove that there is variety within the type and while I distinctly preferred two of them, none can actually be called bad.

Lords of Midnight

Falcon Patrol II, a shoot 'em up, is the only iffy offering, lacking the frills we expect today, though it makes a reasonable filler at this stage.

Whether you rate this as highly as I do will depend on how many of the six you already have; I think the break even could come at the half-way mark and, if you're new to computing, you're laughing.

One complaint about the package as a whole, though; the programs loaded at several different volume levels, which is downright inconvenient. I hope it was a one-off

John Minson

No frills

Program Mordon's Quest Micro Spectrum Price £6.95 Supplier Melbourne House, Castle Yard House, Castle Yard, Richmond TW 10 6TF

he Classic Adventure continues,' says Mel bourne House, which it does in the sense that Mordon's Quest is by the same author. It's also a sequel in style to its predecessor.

Traditional values are the order of the day here. There are no pictures but the descriptions paint far more vivid scenes: in a jungle the light shines through the high trees and water drips from broad leaves on to a mossy carpet. A neatly justified, reduced typeface avoids too much scrolling. A pity, though, that the absence of frills goes so far as no keyboard click.

The richness of the descriptions stops the lateral thinking involved in the many puzzles looking like a mere succession of intelligence tests and the vocabulary seems broad enough to avoid that curse of the adventurer. Thesaurus thumb, I wasn't too sure about this world's location with its ancestral pile in a jungle, but the pleasing humour and urgency of the quest kept me fully occupied. And I'm delighted to report that I've not yet seen hide nor hair of an elff

Definitely one for the traditionalists then, but I also suspect that it will seduce those who've only gone for memory consuming illustrations in the past.

John Minson

Decision time

Program Decision Maker Micro QL Price £39.95 Suppller Sinclair Research, Willis Road, Cambridge CB1 2AO.

he famous renaissance philosopher Liebnitz reckoned the chances of throwing two come and having both come up heads as 1:3.

Since this shaky start, probability theory and statistics have progressed to become a useful and widely applied way of thinking: though they remain tricky territory for the unwary.

In everyday life, and particularly in business, we continually weigh up the pros and cons of our response to problems. If we decide on a particular course of action, we may expect a number of outcomes, some of which are more likely than others. One can imagine further decisions made in response to these various outcomes, and the process continuing. This is the idea of a decision tree.

In business, the arm of the game is to make decisions that pay off in money terms. So the final consequences can be given monetary values. The task is to move up the tree making decisions to get to the end of the most profitable branch. Except that if a very unlikely event is necessary to reach the maximum payoff, it may be wise to try for something less profitable but more likely. Decision analysis solves the tree by identifying the course of action that would (if repeated in that after trial) tend to give the best return in the long run.

The weak part of the method must be one's assessment of the likelihood of the various outcomes throughout the decision tree. Fortunately, with a computer and a well designed program, estimates can easily be varied and the effect seen.

This then is another advanced management technique made widely accessible by Triptych. As is to be expected with this sort of material. OL Decision Maker contains a textbook and teaching program to ensure users thoroughly understand what they're doing. The explanations of EMV, EVSI and Bayes theory are clear with plenty of exercises.

The decision tree is constructed in one half of the screen by specifying the de-

cisions, the actions chosen, the chances of events happening, and their outcomes. Such data is easily altered during and after input, using a smaller detail window. Other windows are used to show prompts and define the function keys. Decisions are made between up to five actions, and events can have up to five outcomes. The manual explains how to overcome these constraints, and the constraint on the size of the tree of 149 should nades песевзалу.

All reports can be printed to an Epson RX or FX compatible printer. The main report is the decision tree itself, together with EMVs. Detailed print-outs of any part of the tree can be obtained. A risk profile is given, so that one can plan to avoid unacceptable risks.

As is usual with microdrive QL software, file handling and medium formatting can be done from within the program.

User friendly, powerful and educational, this program should find many users wherever complex risky decisions with financial coasequences are taken.

John Sucher

Enigmatic

Program Nightshade Micro Spectrum Price £9.95 Supplier Ultimate Play the Game. The Green, Ashby-de-la-Zouch, Leics.

e always expect something special from Ultimate, whose brilliantly detailed graphics. 3-D animation and complex programming never (ai) to bring the best out of the Spectrum. Perhaps it's asking too much that every game should be an improvement on the last. In the case of Nightshade, it's possible to see why Ultimate thinks it's an improvement on Alien 8 or

aging, enigmatic gameplay, good sound effects and music - what's disappeared is the element of interaction.

All the interiors of the buildings are featureless squares; there are no objects you can use or move, just floating weapons to collect and baddies to shoot at or avoid. Although there are some good effects - such as your man changing colour when infected by disease, running faster on finding secret potions, and so on - it all seems rather pointless without that vital involving element.

Although there's much greater element of zapping than in previous games, there's also a good deal of strategy involved in finding

Program The Hobbit Micro BBC disc drive Price £17.95 Supplier Melbourne House, Castle Yard House, Castle Yard, Richmond, Surrey.

he Hobbit has been around for some time but for BBC micros it has been text-only until this disc version appeared

On first running, the game prompts you to insert a blank formatted disc which becomes the picture disc. You follow the prompts and much copying from master-disc appicture-disc ensues. Once you have done all this you can begin

Pressing the space-har toggles between pictures and text. The pictures start appearing rather nicely but are disappointing - still, it's nice to have them. The text is much fuller than the BBC cassette version - which is great.

The game is of course, based on Tolkein's book and is helps to know the book

well. The game doesn't always understand familiar adventuring words but uses 'Inglish' - its own language and to an extent you can actually talk to the characters. They may or may not answer! Most directions can be entered with a simple 'N', 'S' etc. or even using the BBC's arrow keys. Gandalf - the wizard - has a mind of his own and can be infuriating. When asked for food he replied, "No!" - but gave me some anyway, just as well too, hecause if you don't eat in this game you starve to death. As with most adventures it helps to draw a map. You can then avoid dangerous points.

The game can be saved at any stage and restarted when you next get going.

If you haven' already got The Hobbit and you do have discs then this is the version to get. You'll have endless hours of fun for your money. Users of Watford's double density disc filing system beware -it isn't compatible.

Dave Watterson and Michael Reid

Knightlore; the backgrounds are much more detailed, representing a Tudor village afflicted by all kinds of cleverly-designed and amusing demons, plagues and bacteria. As your animated adventurer steps into each building, the walls dissolve to show the inside.

The game falls down though, because, despite having most of the usual Ultimate elements—good packyour way around the village, discovering which weapons work on which demons, and so on.

Still, the game's ahead of nearly everything else for the Spectrum; but it would have been nice if the much-vaunted "Filmation 2" had turned out to be something more than pretty backgrounds.

Chris jenkins

Balanced

Program Dragontore Micro Amstrad Price £7.95 Supplier Newson Consultants, 568 Milton Trading Estate, Milton, Abingdon, Oxon

ere comes the sequel to Avalon, and for the first time at last Amstrad owners can sample one of Hewson's finest pieces of software to date.

Although Dragontoro hasn't been converted by Steve Turner, the original author, it is, nevertheless, as faithful, if not better, a reproduction than the original Spectrum version.

Once again, our hero Maroc the Mage, fresh from defeating the Lord of Chaos,

m set another task. That of Morag outwitting the Shapeshifter in search of the five crowns M Britain. The program is very much an arcade/adventure being entirely visual and joystick driven. with many locations to explore, problems and tasks to complete and over 80 creatures to meet, battle and trade with, in order to collect the various spells needed to solve the game.

Obvious comparisons will be made with Dun Darach and Tir Na Nog, also billed as adventure movies, and graphically they are superior. However, Dragontorcis in some ways more playable and the problems, although very complex at the end, are nucely balanced in the start, allowing you to at loast become familiar with Maroc's strange world.

I always felt the Spectrum version was slightly spoiled by bad flicker as Maroc moved through his pseudo 3D world, but this has all but solved that problem.

Andy Moss

Force fields

Program Cylu Micro Spectrum 48K Price £2.50 Supplier Firebird Software, Wellington House, Upper St Martin's Lane, London WC2H 9DL.

hile the world waits with bated breath for the new Ultimate games (and turns blue while they're delayed) what should appear, sans fanfare, but a new offering from Firebird; and it's a Knight Lore type game at a quarter the price of Ashby-de-la-Zouch masterpiecel

Unless you're a total newcomer to Spectrum gaming, you'll know that this means a 3-D maze with overhead view and a multitude of screens... 200 in all, I believe, and no. I've not counted them all because the maze makers kindly installed force fields, just in case it all got too easy.

Still, if you insert the cor-

rect chip into the maze's central computer, a barrier can be cancelled, and these chips are to be found lying around all over the place. This proves that however clever you are as a maze designer. unless you're also tidy, your efforts will count for nothing.

The place is somewhat untidier than the Popular office in fact, with all sorts of other potentially useful goodies to be picked up. Priority goes to fuel pods, though, because despite your neat little body and clicking walk, you consume fuel faster than the Viroin Atlantic.

Actually this rate of energy loss is rather too swift for comfort, and using the turn keys can be a bit tricky too. The whole game with its handful of keys can take some getting into, but persevere and this neat little program will become as addictive as its more elaborate - and ex-

pensive - big brothers. John Minson

drawing or erasing, which ign't as much of a handful as it sounds. The brush is 'intelliand I found it easy to sketch, producing curves, even Circle. Rox and

Next the Fill commands which provide both solid colour and a multitude of patterns and textures. Setting attributes is easily achieved with a chance to try out Paper, Ink and Border before committing yourself to a choice. At this stage it's worth men-

gent' in that it speeds up if you keep the key depressed though there are also good Asc commands.

tioning that pressing

Word games

Program Wizard and the Princess Micro Commodore 64 Price £12.95 Supplier All American Adventures, Unit 10, Portiway Industrial Centre. Birmingham B7 4LY

first saw this adventure on an Apple Computer about three years ago and I that time its style was quite innovative being mainly

craphic screens with just a small amount of text. Unfortunately it hasn't worn well over the years and now looks extremely dated indeed.

The plot concerns the usual dreadful wizard who has kidnapped the fair princess and taken her to his castle beyond the Great Mountains. Beginning the adventure in the village of Serenia, you have to find and defeat the wizard and rescue the princess.

The problem here is that most clues are contained in the screen images, giving the player no idea what words the computer will understand, indeed only two word inputs are accepted - a sure sign of age. I don't believe statements like "Co Cave, Look Tree, etc." enhance the atmosphere one bit. A good adventure will let you roam around for a while before hitting you with your first problem, letting you get a feel for the story and providing some descriptive elements for your imagination. Wizard and The Princess throws you unto a puzzle from your first move making the whole thing frustraung.

If you enjoy playing word games with the program's limited vocabulary and have all the patience in the world, it's worth getting, but, as adventures go, this one doesn't anymore.

Andy Moss

means that the picture is okay until that slage; pressing 'U' undoes everything from the previous 'O' or fill, which encourages experimentation.

Cutting and pasting is a crucial part of traditional graphic design and the movement and manipulation of blocks of screen is again easily accessed and can be previewed.

You can slide a section of picture around the screen, invert it, mirror it, even squeeze and stretch it, before putting it in its final position.

This last option makes elipses very simple.

Finally there's the text mode, with a selection of typefaces including reduced, though if you're really looking for something personal these can be redefined, and there's the UDG designer. This is one of the best I've seen, and its block of nine graphics means that characters larger than one square can be constructed without too many hassles.

All that remains m to praise the clarity of the instructions which are packed with examples. There's even a tape compressor on the reverse side of the tape and SoftTechnics will make colour screen dumps from your artwork if you cross their palms

with silver.

The package is more than good - it's fun to use. It may not make you an artist, but at least you won't be able to blame the mechanics of producing pictures for interferyour with ing imagination.

John Minson

Sketched out

Program The Artist Micro Spectrum 48K Price 19.95 Supplier SoftTechnics, 12/13 Henrietta Street, London WC2.

here's almost a glut of graphic packages for the Spectrum, and stiff newcomers face opposition.

So what has The Artist got that the others haven't? It's rather easier to ask what it hasn't got -1 only noticed the absence of rubber-banding for line drawing.

What it does have going for it is stunning ease of use. It's almost completely menu driven, with many single strokes giving way to further menus. This results in a logical approach to picture-making and the illustration of the various options where possible, such as the patterns for fill, in the status panel.

The initial line-drawing is controlled by joystick or keys with eight directions. You choose brush width, pattern or character square, then use the fire button or a third key invisible movement.

Shuffle

A taste of Eastern promise on the Commodore 64 written by Mark Gornali

huffle is based on the old game where a bead is placed under one of three up-turned half shells, the shells are swapped around and the player has to choose under which shell the bead is hidden. Shuffle is the modern equivalent of this game, with pyramids as the shells and a cube as the bead. But it is the computer who shuffles the pyramids around and your job as the player is to choose the pyramid where the cube is hidden.

If you choose the correct pyramid you win ten drosnas (the currency), if you

choose the wrong pyramid you lose ten drosnas. You win the same when you have one hundred drosnas and you lose the same when you have no drosnas. Keys one, two and three are used to choose the pyramid where you think the cube is hidden.

The program is written entirely in machine code, but can be entered by running the Basic program. Since there is a lot of data to enter, I have included a checksum to cut down on errors, but I would also suggest saving the Basic program before running it, since a mis-

take in the machine code could result in a fatal crash.

Once you have run the program (and saved it), you could just save the machine code using a monitor. I would suggest saving from \$CDDD to \$CFFF, since the program and all the data (scroll, sprites, etc) are contained within these addresses, and when you want to run the machine code again just type: \$y\$49152.

Rem statements are included for clarity and may be omitted when entering the program.

```

Standard deviation

Statistical functions at your fingertips on the Spectrum 48K from Robert Kirtland

his program performs various statistical functions on numerical data. If this is two variable data, in which one depends on the other as a linear relationship, but when plotted don't form a straight line due to experimental error, then the computer can work out the position of a line which best represents the relationship between them. However, if the data is less than perfect, then the position of this line depends on whether Y depends on X or X on Y. Therefore both lines are drawn,

the X on Y one being the dotted line.

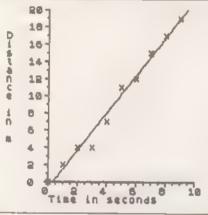

If it is one variable data, then it can be represented by a 3D histogram or a line graph. Due to the limitations of the screen size only 12 values can be displayed in these ways.

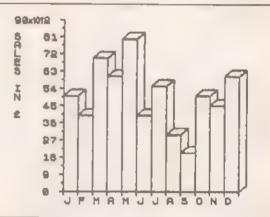

For both types of data, the computer will perform a stansaical analysis. For single variable data this will only be the mean, variance and standard deviation. For two variable data the computer will calculate the mean, variance and standard deviation of each variable inde-

pendently. It then goes on to print-out the lines of regression, covariance and correlation coefficient.

The correlation coefficient is an indication of how good the correlation between the two variables is. A value of one indicates a perfect correlation, and zero indicates no relationship. A negative coefficient indicates a negative correlation.

When the graphs are drawn the axes are automatically scaled with large values being displayed as values multiplied by a power of ten. However, negative values cannot be displayed. When a graph is drawn it can be copied to a printer by typing "C" or you can return to the menu by trying "M". This information would normally be printed on the screen but in this case there is simply no room.

SUMMER SALE!

PRINTER OFFERS

Look at these deals on Centronics Printers. All prices are inclusive of receipted delivery, VAT and lead (please specify Amstrad, BBC, CBM 64, Oric, Dragon, Einstein or Memotech) for Spectrum users we can supply with a Kempston Centronics "E" interface for an additional £20.00

SMITH CORONA FASTEXT 80

Another secop purchase allows us to offer these high quality fully fledged 80 column, 80 cps dot matrix printers at a stunning price. These printers were intended to sell for around the 2250 mark. Our offer allows you IS buy in proper printer for less than the cost IE many thermal printers. Friction speed is standard and an optional tractor unit is available

£129.95

Price includes centronics lead to suit your micro.
Or to suit Specimum with Kempsion "E" interface \$149.98

TATUNG TP100

Bulk purchase allows us to offer this highly popular, high specification printer at an unheard price (i) is from the manufacturer and of very similar specification to the Mannesman Taily MTBO - and Sharwa CPABO This abilit of printer reputate to be the most popular in its class possis many shapeth features it uses square gins which evoids that dotty book and gives a riciny formful up "near latter quality" print at 1000ps Freton and tractor lead are standard. In has full graphites ability. Take a look at these unrefounder actual are print samples.

Standard PICA text (100cps)

PICA text emphasised

True descenders on jpg etc. ELITE mode gives 96 columns

CONDENSED note gives 142 columns ENLARGED mode susscripte and superscripts

underlines nicely Italics available in all modes

We are convinced that this printer offices the best performance and value in its class and a) our unboard of price is a SARGAM.

ONLY £189,95

Price includes cable to suit BBC Amstrad, Einstein, CBM 64, Dragon, Memotech or Oric or to suit Spectrum with Kompston Einstarlace 1209.95.

MICRO P MP165

This printer is a very high specification at an unbellevable price. It hoarts 195 on its draft mode and 70 ope to near letter quality mode which is which in switch in softwarm execution. It is forced in and trie for feed as standard has a 2K buffer and its EPSON compatible of cover a user or EPSON library. can print in standard PICA 80 column mode or a variety of others from onlarged 40 column mode to condensed at 132 column itselfs are assoluble in all modes. Normally tals printer would be expected to sall at 2000 plus we are digiting it at our ultra lean price inclusive in printer lead to suit BBC, Anistran, CHM 64, Print Bragon, Einstein or Momotoch.

ONLY £249.00 Or to sull Spectrum! with Kempsion "E" interface 1289.00

COMMODORE READY PRINTERS STAR SG10C

A supero new 120 cps Commodore ready printer that offers many features including friction and fractor feed. CBM preprios, near letter quality mode ato. Packaged roady to use at the special introductory price of

ONLY £255.00

COMMODORE MPS801 & COMMODORE 1541 DISK DRIVE

Unballevable price on trese popular items suitable for the "64 & Vic 20

ONLY £99.95 (this is not a misprint)

Tracing the call

If you're having trouble debugging programs in SuperBasic, Simon Goodwin has the solution

sinclair's SuperBasic is a mixture of standard Basic commands and structured statements derived from languages like Algol and 'C'. It does contain facilities to debug programs written in simple Basic, but very little for those who want to test programs which use procedures and functions.

However, now help is at hand, in the shape of our 'structured debugging' commands, Find and How Come. One allows you to locate any procedure or function just by typing its name. The other traces through the procedure and function-calls at any point as a program is running. There's no longer any need to memorise line-numbers, or decorate your code with Print statements to keep track of the program flow.

The procedure presented here and next week have been tested over several months, on all versions of the QL. They've been used to develop complex, structured SuperBasic programs (sometimes over 2,000 lines, without a single Go To or Go Sub!) and they've saved many hours which would otherwise have been spent poring over listings.

Before we get to the procedures themselves, let's look at how SuperBasic programs are stored within the QL.

QL SuperBasic is organised very differently from the majority of nucro Basics, which keep the program in a similar form to that produced by the List command. Here, statements are stored in memory much as they were entered; special values called 'tokens' are used to represent common words, such as Print and Stop, but the rest of the program is stored in textual form – just as a string is stored in memory. The QL uses a more complex system which is designed to cope with very large programs.

On a standard QL there is about 88K free for Basic; this figure can be increased to 600K without problems if addon memory is fitted. Contrast this capacity with that of the IBM PC, which allows only 63K for Basic programs, even on a 640K machine. The Microsoft Basic used by IBM, and many other suppliers, is based on a program written in 1977, when 64K was considered an enormous amount of memory.

Microsoft keep data in a small group of tables. This system works very well for small programs, but it becomes increasingly inefficient as programs get longer. Every time you refer to a variable in a Microsoft Basic program, the computer has to search through the table of names, one by one, until it finds the one you want. This doesn't take long in short 'benchmark' programs, but it can take ages when programs get large – per-

haps half the execution time in a 40K program.

The QL scheme is rather different. Names in a QL program are not stored in their text form, but as index numbers. Each number corresponds to an entry in an index for every name - the Name Table. In turn, that table contains numbers which indicate the position of the text of the name and its value, within two more tables. The 'type' of each name - function, string or whatever - is also stored in the Name Table.

Figure 1 shows the storage of a twoline program: 10 PRINT number 20 STOP. The first 114 entries in the Name Table describe procedures and functions built-in to the QL; we've only listed the first three of these.

At times this just makes life more complicated. When the computer Lists a program it finds the index numbers and

them up in the Name Table The Name Table indicates where text of the name stored. List outputs that text and carries OIL Microsoft Basic just spits out the characters as it finds them.

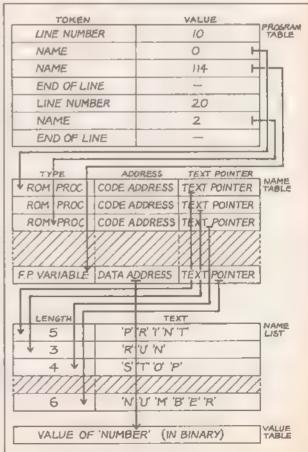

When you

come to Run VOUL program, however, the QL scheme begins to make sense. As names are found. they Can he looked 110 directly in Name the Table. There's по need 10 search the table from the start. since the details of each name occupy a fixed amount of You can take the index number, multiply by that fixed amount, add the start address of the table and the details are at your finger tips (or, at least, your digits!). The entry in the Name Table tells you exactly where to go to find the correct data.

Microsoft Basic has to search through its list from the start, because it stores names in text form and keeps the values and names muddled together in one big list. Different types of variable need different amounts of storage, so Microsoft can't just go directly to the correct entry: a slow, painstaking search is needed.

The QL keeps values jumbled up as well, but it can find them quickly by using the Name Table as a kind of intermediate index. The Name Table and the variable values are kept apart, so that entries in the Name Table are always he same size. The text for each name is only stored when the name W first typed, so you can use long, readable names in your programs without wasting memory. Thereafter, names are just stored as index numbers within the program.

So much for the theory - next week the practice, with Find and How Come program notes and listing.

Part of the process

A useful mini-wordprocessor for the BBC B from the keyboard of M Smith

ordway is a tape-based miniwordprocessor written in Basic for the BBC Model B. It supports a 66 line page of 80 column text with an 80 column display. The features within the program include Text Entry, Text Editing, Saving To or Loading From Tape, a simple form of Justification with a Preview Mode and of course Printing. It is not in the same leadue as Rom-based wordprocessors, but it is easy to use and gives good results.

Text Entry: // - opens Entry Mode, /2 closes Entry Mode. Tab indents your paragraphs. Press fl, type in your text using Tab to indent each paragraph (if you so want) and using Return to close each paragraph. Do not worry about the line endings as these will be sorted out when you print your text and you can preview the effect before printing. I you are preparing lists or forms that must appear as entered you will be able to print these in your selected format.

Editing: 13 - opens Edit Mode, f4 closes Edit Mode. 15 - to Insert. . - to Delete, 17 - to Overwrite, 17 then 18 - to Split a Paragraph, 19 - to Jump. Use the cursor keys to move the Editing Cursor to the required position on the page.

To Insert, position the cursor at the space into which you wish to insert and press 15. You will be asked to wait for space to be created and the screen will clear. Type in your new letter, word. sentence or paragraph (if paragraph close it with Return) press (2 and wait for the computer to sort out your text.

To Delete, position the cursor under the first latter or space you wish to Delete, press 16 and then press Copy, move the cursor to the last letter or space and press Copy again. Wait while the offending passage is removed. If you are removing a single letter or space position the cursor and press Copy twice. Do not use Delete if Overwrite will do the same job as Overwrite is faster.

To Overwrite, position the cursor under the first letter or space you wish to overwrite, press 17, type in your alteration taking care not to go past the end of the line. Press Return when finished or at the line end and the change is made.

This week, part of the listing - next week the remainder plus more instructions. Meanwhile, if you find the idea of typing it all in a bit daunting, I can send you a copy on tape for £3.00 (disc £6.00) and a 17p stamp. Write to M Smith, Gwylfa, Llangadfen, Welshpool, Powys SY21 ONW

The most accurate horse race predictor on the market

- * Tipster V2 took 18 months of trial and error hefore we arrived at the system that makes it the most accurate race predictor on the market.
- * Fully tested against other computer race predictors.
- * Tipster even performs better than the human tipsters from the top nine newspapers.
- * Many winners found at high prices.
- * For both flat and national racing.
- * The system will never go out of date.
- * We reveal the secrets of profitable betting.
- * Special tutor for the absolute beginner to racing.
- * Tipster also includes a program to calculate your returns for you.

If you can buy a more accurate race predictor we'll refund your money

Don't be tempted to buy cheap or interior products.

III I. SYSTEMS

PO Box 171, Wolverhampton, West Midlands WV10 0PJ

Leaves all other race predictors in the paddocks. (Please state computer)

- Commodore 64- DI /K

TUESD SREAKED II Now transfers many more turbo's to dish before e.g., Novalouds, Pavinadore, Pavloadore with pictures, Fisshload Syperioad, ChS, Ariola, Surser, Micro Power, Adventure inter, and lots more

TRANSFER II To transfer those alow load games to disk

1. STEER DISKNOY Now copy from Disk to Disk to nely 3 MINS De one disk drive, copies protested convercial disk with error tracks

REO MENO MAKER. This is a solective menu maker that also saves a disk turbs with the file, so now you ship include the file names you what and then turbo load them from the disk.

YOU GET ALL THIS ON ONE SUPER DEDU FOR ONLY (22,00 INCLUDING P

SUPPLIES SUPPLIANCES

TVERD BREAKER II OFFLY \$12.95 TURDO MENU MAKEN CHLY CLO.93 SUPER DIGEOPY ONLY \$10.05 TRANSFER II DNAY

ARROW FILE Now you can store att your software records in order. List them all or by lotter, print them out in double column. This program can be used to make limits of books etc., Doly 010.85 Disk.

pisk noorde & tolt disk editor, recover a scratched file, addiamy plock, swend may track, list may track. Only 48.00 Tape

TORBO SAVER. Make odey back up copies at turbo spend from your elew load program, milti garts etc., easy to use.

DISKOPY; a metertive disk copier to transfer only the files you wish from Olsk to disk, very easy to use. 07.00 Tape

20 Portmeadow Walk: London S.E.2

You can do it!

beginning machine code
On the commodore 64

a simple introduction for beginners
david lawrence & mark england

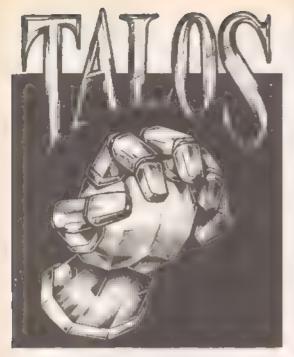

You don't have to have a wet towel wrapped round your head and a bottle of aspirin at your side to learn to program your Commodore 64 in machine code — there is an alternative method. By concentrating on simple concepts, and by explaining every step carefully, with plenty of examples, David Lawrence and Mark England show it to you in their book Beginning Machine Code on the

Although it can be difficult to become fully proficient in machine code programming, each instruction, in itself, is relatively simple to understand. The authors are careful to bring out this in their approach, showing clearly and carefully what each instruction does and how it is used. Then, when you feel more confident as a machine code programmer, you can begin to construct more and more adventurous routines from a collection of the simple individual instructions.

David Lawrence and Mark England are experienced machine code programmers on the Commodore 64, being authors of Machine Code Graphics and Sound for the Commodore 64 and The Commodore 64 Machine Code Master, but not so experienced that they have forgotten the pitfalls and confusing points that await the beginner.

So, if you are ready to take your first steps into the world of machine code programming on the C64, this is the book for you.

Arcade Avenue

Finders keepers

t seems that the gremlins have crept back into the column again and one of the first mistakes that I have to correct concerns JSW II.

In addition to some letters on the subject, I have also had some messages from over-wrought members of the Software Projects team who wanted to point out that, contrary to the letters we printed a few weeks ago, you can in fact take a ride on the yacht. It's not surprising that so many people have got misled on this point because to succeed involves some very tricky

gamesplay. Anyway my thanks go to Mark Whitaker and A. Nopny Mouse (!) amongst others for explaining how it works - to ride the yacht you must trip switch and then get to the yacht to collect the object and the one in the bow without losing a life on the way! Then walk left and wait for your trip to the desert island. The switch has nothing to do with the cartography room - instead you find that every new room you enter makes a block appear in this location, hence the name, and you have to visit enough of the lower rooms before going here to make it possible. Apologies to everyone concerned for barking up the wrong tree.

I have also been supplied with info about two secret rooms that can only be entered by cheating with *Pokes*. I will assemble these *Fokes* and some for the infinite lives on the Spectrum and MSX versions and print them in the column in a week or two.

More urgently this week I want to clear up a couple of errors printed in the August 8th issue that dealt with Finders Keepers. First of all I misread the name at the bottom of the letter and it should in fact have been credited to John Wilson of Rochdale rather than the mythical John Wat-

son, secondly there were two errors in the program he sent in for reading hidden words in machine code programs - line 40 should be If Peek F= 32 Then Go To 70 and line 60 is If Peek F= 127 Then Go To 70.

Anyway there is good news for both John Wilson and John Watson in the form of this letter from David Jones, the very hand responsible for all the sleepless nights Finders is giving gamesplayers everywhere.

"As a regular reader of your column, I would like to Merge the old Basic header and edit it or enter a completely new one to produce the program below.

"The program will load as before but will enable a 100% score, if you can work out how. Have any of you hackers out there discovered my test routine that enables the player to go direct to any room? If not then Fil give you a clue; it requires three pokes to locations that are zero when you load the game."

If no one can crack his challenge in a few weeks we will print the answer. times as low as 58 seconds. Start the qualifying lap as usual but just before the Becketts corner stop, turn the car through 180 degrees and drive back down the course to pass the starting flag again. Then brake the car, reverse back over the flag and it is recorded as a valid qualifying time."

Now then, in response to many pleas for help, David Noble of Bexleyheath has kindly sent in a complete solution to the game Castle Quest. The problem I face in giving answers to your spe-

offer some solutions to the problems posed by John W. First of all I would like to point out that the Rooms score was never intended to reach a total of 100 - I didn't think people would mind since many games put the % sign after numbers that never reach (or go beyond) 100. Having now had time to think about the game, I have taken some time out to manufacture a few Pokes to increase the total room score to 100 - it works by rerouting the score routine to a new subroutine stored in front of the main code.

"The problem with the mouse is an oversight on my part (sorry folks) but it will also be corrected and included within the game. To get the new Pokes in, either

David finishes his very welcome letter with some excining news about a game I'm very much looking forward to. "My new game will be out in about a month and is much more of an arcade/adventure than most games that claim the title, it will be called Spellbound and considerably more advanced than Finders Keepers."

To round up this week's column i've got a couple of tips for the BBC. Simon Whitelegg and Tim Moll of Sheffield write concerning the excellent game Revs. "On August 1st I achieved a lap record of 1:24.4 on the Silverstone circuit without cheating and Tim managed 1:24.5. Can anyone beat these times? We have also discovered a way of qualifying with

cific queries is that they are very complicated and may not work unless you have followed David's route through the earlier parts of the game.

However, many people want to know what they should do with the wand - as far as I can see its only function is to be restored and in your possession m the end of the game - it stops you falling into the water and a game completed message appears. Not very helpful eh? ! think the best approach is to serialise the solution III the game in small doses over several weeks of the column. starting next week. This ensures that we don't spoil the enjoyment too much and stops it being too boring for other people.

Tony Kendie

Tony Bridge's Adventure Corner

Wide vocabulary

alling Bridge! Calling Bridge!"
Yup, it's a weirdo, but it's also an adventurer in distress, so we must help if possible: "This is firm Richards below decks on Starshup Snowball... Wheep... Rzzt... unable to find welding glasses... Bleep... to repair tractor, request assistance... Rzzt... also what happens to bomb (I know/assume that it explodes)... request assistance!

"Ere! Wot's yer 'andle on CB, guv? I bin pickin' me brains ter fink of a way ter get inta the deserted 'ouse in *Urban Upstari*. Can yer 'elp this anotty-nosed berk get parst the rusty door?

"Ahar, matey, of be stuck also in Pirate's Cove, of ain't found much, ceptin' a bag o' munchies, a lifebelt an' a rusty torch. Can 'ee 'elp, where be I agoin' next, matey?

"Also, verily, I am a weary traveller stuck in the mystic cheapo game entitled The Helm. Can ye mayhap assist my passage beyond the first 13 locations — can I enter the shop? How do I cross the chasm/ravine etc?"

As I said, a complete weirdo, but here's some help. Jim: Beep beep... the glasses are in the Observatory... crackle... it's a very red bomb... rzzt... smells fishy, too...

Lock John, don't yer know nuffink? Yer 'afta 'ave yer bottle of milk in the mornin', don't yer? I mean, 'ow else are yer gointa get the strengt! what yer need? Cor blimey, some people!

Avast there, Jim lad, why don't 'ee try going to the window, ahar! Then say what us salts of the sea are always saying. Yea, verily, one of your stature must needs enter the shop, yet a key is needed to unlock the door. Hasten ye to the well in the desert, good knight, and there shall be found a small key (a good score is to be had for entering the store, so you must work out how to get the key for yourself). And yea, the signs will tell you how to find an object which will aid your passage across the gorge.

I hope you persevere with the rest of the adventures that you mentioned, Jim, as games like Heroes of Karn are well worth getting further into: in this particular instance, have you tried lighting the marsh gas with the tinder? Then you can take the frog and then loss it.

On to a comparatively normal adventurer. Tim Emanuel from Rossendals, who is creeping about the Count's castle (in Scott Adams' The Count). He's having trouble getting a light. You'll find a torch down a dark pit, and you can actually get it without seeing it — but in order to light it, you'll need the matches from the pantry.

Worst aspect

Di Spencer (bet you've heard all the jokes, Di) writes from Wolverhampton, in part to take me to task for not ever having mentioned Twin Kingdom Valley—well, I have occasionally mentioned it, but never played it, so I must recruit some help. John Rundle seems to have the adventure tied up—if you write to him at 26 Western Road, Aldershot, Hants GUII 3PL, I'm sure that he can sort out any problems you still have.

Di is also stuck in Channel 8's Circus. To fix the Generator, all you need do is type just that! But the maintenance wagon, as you suspect, does hold something that you'll need in another part of the adventure, and to get in, all you need do is type Open Door and then Go Door (a construction that you'll need elsewhere). This is a good example of the worst aspect of this whole series of adventures — I may well be that you enjoy finding the right words to spur the computer on, but I prefer to spend time on the problems themselves.

While I'm talking about Mysterious Adventures, Luz Stafford wrote to tell me how pleased she was to be getting so much correspondence a year after putting in a cry for help in the Helpline.

She reckons that Brian Howarth's adventures are very good and wonders what is happening to him now. I imagine that he is still out there somewhere knocking out excellent programs — the last adventure he wrote (as far as I know) was Gremlins, and that upheld the fine tradition that he had built.

Simon Hegarty is looking for someone to write to him about Spiderman and System 15000 on the C64. He is willing to exchange help in many adventures, including The Hobbit, Thompson Twins, Gremlins, Twin Kingdom Valley, Subsunk, Hulk and so on. His address is 15 Highfields, Hoylandswaine, Sheffield S30 6FP.

Logical pattern

Tel and lok (from where, I don't know) are having trouble with Heroes of Karn and lewels of Babylon: of the former, another enduring adventure, our intrepid Tel and Jok want to know how to negotiate and/or kill the Phoenix, and also how to kill the Bat. To deal with the Phoenix, which as you know rises from that pile of ashes, just water the ashes before it appears - if you're a bit tardy in this, though, you could ask Beren to attack if with the sword. Shortly after this, you'll need more water to deal with another adversary, remembering your Wizard of Oz. As for the mazes in Jewels, I don't know if they follow a logical pattern, but a recent Corner gave the route through a couple of them, so refer back for a solution.

Tel and jok have asked me to paus along a couple of hints to anyone currently in another interceptor adventure, Forest at World's End. "When you have the sword," they say, "go to the glowing rock and type Touch Rock. Secondly, do not attempt to force yourself on the Princess, as she will run away."

Incidentally, some people find that the vocabulary in these interceptor games takes a little getting used to: many of your comments will take the form of 'Attack thingy With whatsit', 'Say To fred "Hello" 'or 'Go To x room' as well as the more obvious constructions.

Rafael Stroinski is having trouble in The Hulk and Snowball. To get out if the chair, Rafael, you must Rock Chair (and maybe correspond with Simon Hegarty for more help later). If you get the Extinguisher in Snowball's Engine Room, you can put out any fires.

Finally, a bit of help in So-Kee of Assiah in response to a plea of help from Carl Brennan. Clive Wilson has written to say that, as regards the sliding doors, you should try sliding them; and to get the Rod of Light, go East twice from the Ice Block Room and open the Red Valve. Light the Torch and return to the West (twice remember) and light the gas. Now go east twice and open the Green Valve and return to the West—you should now have the Rod.

Adventure Helpline

Going bananas? If you are stuck in an Adventure with nowhere to turn do not despair - help is at hand

Fill in the coupon, explaining your prob-

lem, send it # us, and a fellow adventurer may be able to help.

Winning phrace No 41: "Kangeroe seitles hit for six, sport!" from Durren Levens, Hard, Race, who receives EES. Runners up: "Paris ghost exposed in Eiffel tower" from T E Surdie of Landes SW14, "I was thirsty, exploring deep potholes" from Endrew Cunningham of Oban, Asystic of "Frankly, I find this too easy lot words" from David Crighton of Retford, Rotts.

Now voting on week 43 - £25 to win

Each week Popular is compiling its own special software top ten chart - compiler by YOU.

And each week we will send £25 II the person who sends in, with their chart rotes, the most original (witty, neat or clever - but never rude) phrase or sentence made us from the letters (you don't have to use them all) in the titles of the top three programs in this week's Readers' Chart, published above.

You can still vote in the chart without making up a slogan - but you won't be in the a chance of winning the prize.

All you have to do is fill in the form below (or copy it out if you don't want to dail, age your magazine) and send it off to: Top 10, Popular Computing Weekly, 18-18 Little Newport Street, London WC2H TPP.

Voting for Week 43 closes at 2pm on Wednesday September 18 1985. Entring post voting that time will not be eligible for inclusion in that week's voting. The interesting is final. Only one entry per individual per weak will be allowed.

ATTOORISED TO A STATE OF THE PROPERTY OF THE P	3

GET EVEN MORE ATTAC

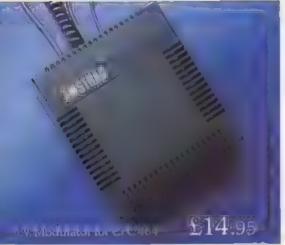

HED TO YOUR AMSTRAD.

Amstrad owners start out happy, and get even happier as time goes on.

The first delightful discovery is that both the CPC 6128 and the CPC 464 are complete and ready to use as soon as you get them home.

The CPC 464 comes with built-in datacorder, and the CPC 6128 with built-in disc drive. And both have either a full colour monitor or a green screen.

But Amstrad owners can become even more attached to their computers with the simple addition of the peripherals featured here.

They'll make your Amstrad faster, harder working and more entertaining.

And they're very easy to attach. Simply plug in, and away you go, there's no need for extra interfaces.

You may of course wish to get into some even more serious computing, for which you will need the Amstrad RS 232C specialist interface. This opens the door to modems, networks, and serial printing.

But whichever additions to your Amstrad you care to make you'll find their low prices an additional pleasure.

l	Tell me more about the Amstrad range	of
	peripherals.

LOW KICKS

Earateka is a karate game that pre-darts (in the US on the Apple II) Way of the Exploding Fist by a year or more. On balance it isn't as good on the C64 but nevertheless there is much to recommend it.

Like Way the game is basically a series of fights against ever more powerful opponents fight movements are all journal on the presses and mixed short and long fire button presses.

The manoeuvres have been kept to high/middle/ low kicks and high/middle/ low punches - it's adequate, and there are some nice comic book 'off' flashes when you hit home, but I missed the old low punches and sliding side sweeps.

Where Karataka does acore is in background plot. Where Way basically had you saeking higher spiritual planes through correct lighting technique, Karateka gives you a damsel in distress to rescue. Each opponent is sent to meet you by a baddie war-

bick of K

MINOR STRATEGY

A long time ago, an American company called Williams produced the best arcade machine in the world and they called it *Defender*. Being an arcade classic, when the home micro boom took off, it became one of the most frequently plagiarised formats, even to the present day take a good look at the excellent *Dropsone* for example.

Delender was a great success for Williams, as (to a lesser extent) was the follow-up, Stargate. One of their lesser post-Defender ventures, though, was a game called Sinistar.

It is now available, called Deathstar, on the BBC and Electron from Superior Software - and it really is very good indeed.

Very fast smooth scrolling with bags of zapping plus a minor strategy element. As far as I'm concerned, it's better than the original (for a start I now know what I'm supposed to be doing), and it's all very professional as you mine the planetoids for Starbombs to destroy Sinistar (whoops, sorry, I mean Deathstar), and blow away the assorted nasties

that get in the way. And just like the original - and this must have taken up bags of code to implement - you can't turn the sound off. Oh well ... despite this major drawback for we late night addicts, this one is a must for all BBC zap fiends.

to the game, the movie-like cutting from one scene to the other works well, eg, you deleat a baddie, cut to warlord sending another to meet you. cut back to you running on and meeting new baddie. The music too, is more inventive than usual, if somewhat bizarre.

My only real criticism is the way the tape produces an infuriating version of the disc. On disc the game loads in different sections for different stages. On tape this means loading up a new bit every so often and it gets very infuriating.

It's a shame that Way is that little bit better, because that factor aside, this is an excellent program.

HIGH KICKS

Once Moore Bond leaps into action like an emacated ballet dancer in the Amstrad version of A View to a Kill, the Domark spectacular that has already had Spectrum and Commodore owners levenish with indifference.

Not that the game is exactly bad. Hype and film tie-ma aside, it would probably be pronounced obsyish to good, but everybody expected so much more from its possibilities.

Actually A View to a Kill is three arcade games and an animated intro which replicates the moving eyeball/blood section that preceeds every Bond movie (it may be the best bit of the whole program) — the Amstrad chugs out the Bond theme rather tinnily, but at least it's a million times bester than the

Spectrum equivalent.
Curiously snough the first game, universally considered to be the worst one on the other machines, has now been sent to the back of the queue, as game number three. This, of course, makes nonsense of the plot, but never mind.

Game one is now the silicon mine where James Bond leaps about doing high kicks and prrouettes, searching for a way to defuse the timer and the situation. There is also a joystick controlled menu system which lets our hero select different actions and objects. It reminds me of an inferior Impossible Mission.

Game two uses a similar menu system to part one but in a slightly more adventure

orientated setting. The task is to get out of the burning city hall, with the usual half witted Bond woman. If involves finding keys, solving puzzles, and quite an ingenious mixture of text and graphics. I think it's the best section.

Part three was part one and supposedly what you have done in the past sections has some sort of bearing on how you do in this one, according to the instructions. Since the Paris section is sequentially first in the film, presumably you get beamed backwards in time.

The Paris section with still pretty bad although the display has been beefed up a bit. Bottom right is a top view of city streets and your car—you have to chase a parachute around trying to catch Mayday where she tands. Above this is a rather spurious forward view, it doesn't show any other cars, and doesn't must relate to the map at the bottom anyway.

So, several curate's eggs on one tape, and a program that is both laughably incompetently bodged, clever and dull, impressive and tedious.

A BONUS

Macadam Bumper is, oddly enough, a French program being issued here by PSS. It's a pinball constructor and contains Amstrad and Spectrum versions on one tape.

First attempt at playing the game revealed a major question — how to make the ball fire. I pressed every key I could think of and discovered the answer well hidden on the insert.

The system works very well, the demo pinball machine has all the right ingredients; flashing lights, bonuses, sets of flippers, etc.

Devising your own pinball table is straightforward, simply choose a component from a selection on screen and position it where you want on the basic board layout.

To the best of my knowledge, Macadam Bumper is the first pinball constructor for either the Amstrad or the Spectrum and that should make it pretty successful.

Tower of Babel

roups of workers were commissioned to build a magnificent tower. It was to reach the skies and be the largest such edifice ever constructed.

They started out with enthusiasm and conferred together on the technology and the processes required to achieve their goal.

But, as work progressed, each small caucus developed its own way of speaking within its small circle to like-minded workers, to help them solve their own particular problems in building their part of the tower. Slowly they began to find difficulty in communicating with members of other groups until, finally, each worker had developed his or her own tongue and had become unable to talk to any one else. And work on the tower ceased.

The characteristics of the work and the complex demands of the technology involved the rejection of other work, technology and groups. In other words, as the database of knowledge required to work increased, it was no longer possible for any one person to comprehend the whole — and each was forced to specialise. The same situation exists today in the scientific community. A solid-state physicist would find great difficulty in communicating details of the 'leading edge' of his or her technology to, say, a mediaeval historian.

We are fast reaching a similar situation to the workers on the tower with micros.

Take the early days when dialogue was difficult to learn and the machine relatively simple (with mechanical contrivances and hand operations). People could converse with one another in a common attack on the vagaries of the machines.

With the advent of Basic, developed out of Fortran, the troubles really began. Not even abbreviations were agreed – whereas some machines accepted? others wanted P. and there was singlestroke key entry and refusal to accept abbreviations at all (and everything in upper case).

We were bewildered by Basic Levels I, II and III, as if there was some hierarchy of the language which only the sophisticates could understand.

With the advent of procedures, of which there is no agreed format, Gosub and Goto were relegated to Non-U ways of addressing machines.

Perhaps it is a mistake to call 'language' the instruction design for getting the computer to work. Unlike human beings, the computer cannot draw in historical contexts of what the words mean. Nor can it evaluate the intelligence of the source of the commands by slender clues about the originator of the

Human beings, like computers, bring to language a labelling system. But they also weave the spell of language to give an indexical expression to the words of almost infinite variation.

Computers have no such complex communicative and interpretive skills. Their understanding is almost completely inflexible - the syntax has to be absolutely correct for meaing to be transferred. Yet different computer languages are still proliferating at a hectic rate - all the time reducing the number of machines that can talk to each other.

If we are to avoid the kind of Babel chaos that at the moment seems inevitable, some form of standard protocol for communication between micros must be established. Agreement must be reached between manufacturers to at leat standardise some of the Basic instructions so that people can transfer from one machine to another without extensive re-learning.

Rod Dawson

Curious property

Puzzle No 174

Jamie was idly toying with his pocket calculator the other day when he found a couple of numbers which exhibited a rather curious property. The digits in the product of the two numbers were in reverse order to the digits of their sum. He was so impressed by this that he showed his results to his father, who told him that there were an infinite number of such pairs of numbers, each one having a direct relationship to the pair that he had discovered.

If Jamies' numbers contained three and one digits respectively, can you determine what these numbers were and find the basis of the infinite series of pairs of numbers?

Solution to Puzzle 189

In the crossnumber puzzle, A=268 B=239 and C=107. From the number of spaces in the grid we know that both B and C must be in the range 100 to 317, as they both have five digit squares.

Also, the difference between A and B must be in the range 22 to 31 in order to result in a five digit cube and a three digit square. In the case of the cube, A must be larger than B, otherwise a negative value would result. Therefore A is in the range of B+22 to B+31.

KARATEKA

TEALTH

Braderbund

A Karateka is one trained in the Way of Karate, the centuries old martial art of Japan. In this classic story of one man's battle against insurmountable odds, your mission is to rescue a beautiful princess from a dungeon deep Inside the palace of the evil warford Akuma.

Inside the palace of the evil waterd Aktima.

Broderbund have created an arcade action game as close to an interactive movie as computer game players are likely to see. Extremely large and realistically animated figures come alive against beautifully detailed scrolling backgrounds. You are in full control of the hero's every movement. Walking, running, bowing and all fighting movements including the strategic timing and placement of kicks, thrusts, jabs and punches are an integral part of the gameplay.

The story progresses through a senes of increasingly more challenging encounters with the enemy, until you finally meet the uttimate opponent. Built-in surprises make trying to rescue the princess difficult and addictive.

A FABULOUS 3D MARTIAL ARTS KARATE PROGRAM

▶ STEALTH

STEALTH has everything the arcade action player dreams iff. You are right at the heart of the action as you pilot a powerful Stealth Starlighter on a mission of utmost importance - to destroy the Dark Tower and with it the Merciless Council of Nine.

The sky is alive with warp-fighters closing in from all directions. The landscape bristles with automated radar towers

firing heat-seeking projectiles of doom Robot-controlled photon tanks ... high energy
